

# Dilution™ SOLUTIONS

## ePC Quick Start Guide ePulse Control Water Meter Splitter

### Included in the box

- ePulse Control
- Bracket Mounting Kit
- Operating instructions and maintenance manual

**NOTE: Remove safety labels before installing and remember that pumps may hold water inside.**

### CAUTION

- See operating manual for complete instructions and safety standards.
- When connecting a metering pump either to a public water supply or to its own water source, you must respect the regulations in force concerning protection of the source i.e. backflow prevention, etc.

 **ETATRON**

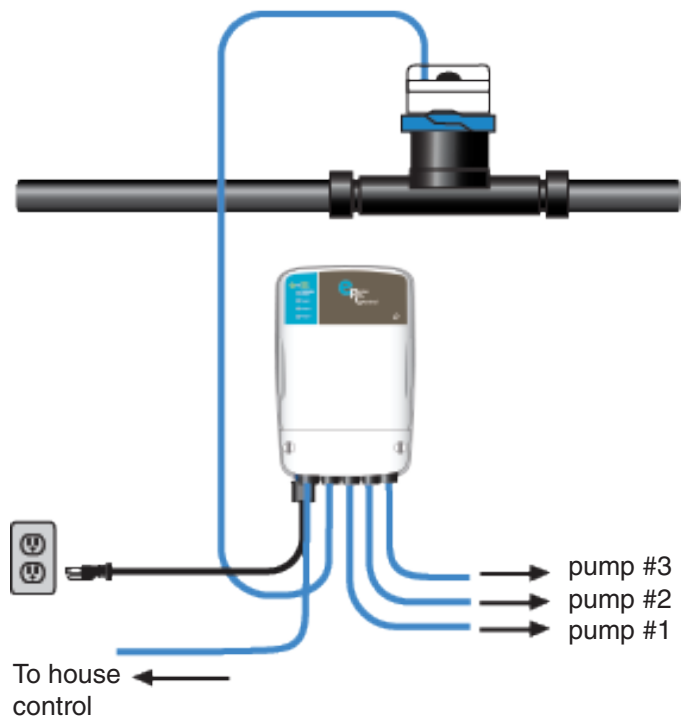

## INSTRUCTIONS

- 1** Indicate whether the Water Meter is 1PPG (1 gallon per contact) or 10PPG (10 gallons per contact).

- 2** The lead wire next to the power cable connects to the Water Meter.

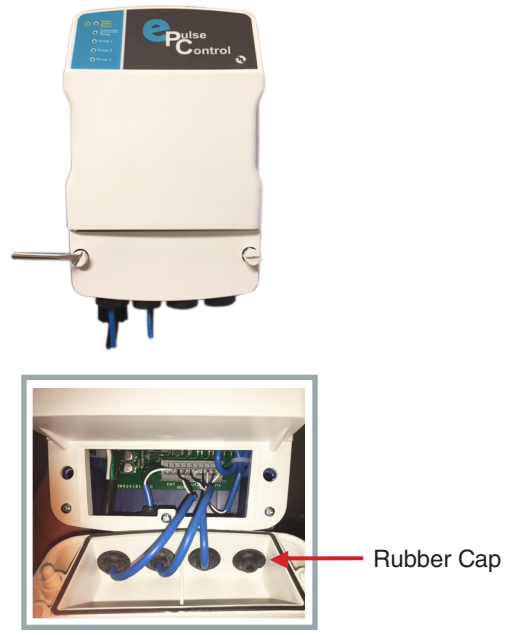

- 3** The lead wire in front of the power cable connects to either the house controller or Pump #1. The next wire connects to pump #2.

(Continue to back)

(Continue)

- 4** If you need to install a 3rd or 4th pump, remove the lower access panel in front of the ePC. With the use of a punch tool, run a small hole through the rubber cap, and thread the lead wires to connect the pumps.

- 5** Plug in the ePC. The Power LED light will be lit green.

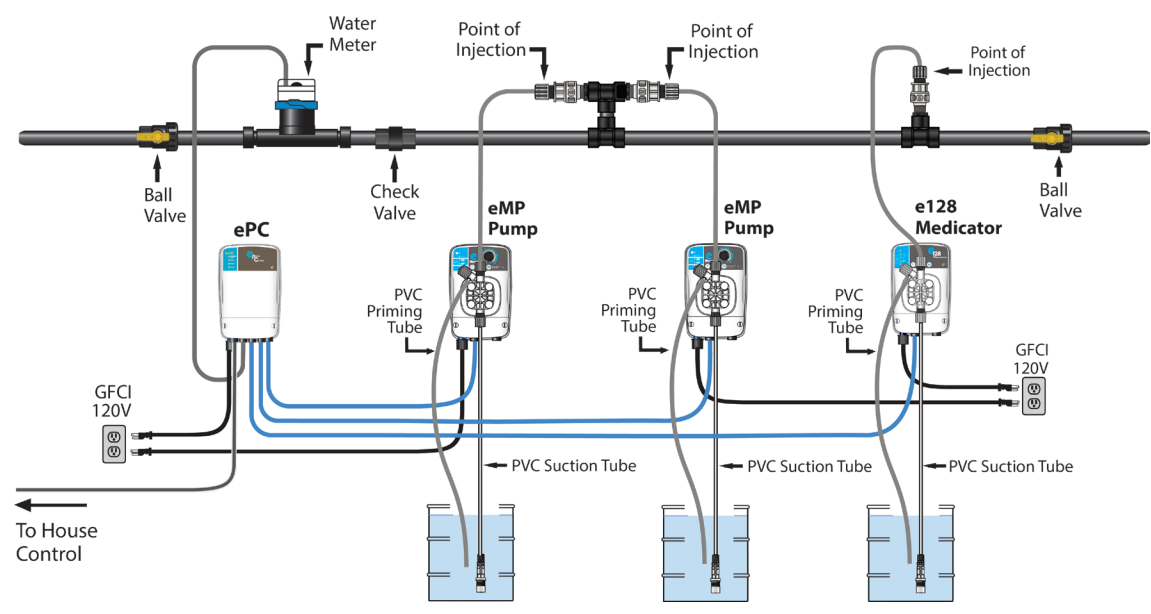

- 6** When the Water Meter closes the contact, all four (4) LEDs will light up indicating the signal is being made for each device installed.
